MEASURING · CONTROL · SYSTEMS

The miniature-pyrometer CellaTemp® PM is as small as a thumb. The optic, complete electronic as well as the linearization and ambient temperature compensation are situated in a housing of only 36 x 20 x 52 mm. The linear analogue output can be easily connected to commercial digital displays, automatic controllers or to a PLC without any additional electronic.

The emissivity for the adjustment of the pyrometer to the radiation characteristics of the measuring object is externally adjustable.

Because of its non-hygroscopic precision lens and its waterproof metal housing, the CellaTemp® PM provides the user with exact and reliable measuring results even under very rough industrial conditions.
